29th International Conference on Flexible Automation and Intelligent Manufacturing (FAIM 2019)

Beyond Industry 4.0: Industrial Advances, Engineering Education and Intelligent Manufacturing

Procedia Manufacturing Volume 38

Limerick, Ireland
24 - 28 June 2019

Part 1 of 3

Editors:

Alan Ryan
Seamus Gordon
Peter Tiernan

TABLE OF CONTENTS

PART 1

ADDITIVE, SUBTRACTIVE AND HYBRID MANUFACTURING

A CONTINUOUS PATH PLANNING APPROACH ON VORONOI DIAGRAMS FOR ROBOTICS AND MANUFACTURING APPLICATIONS 1
Melih Özcan, Ulas Yaman

A STEP-NC IMPLEMENTATION APPROACH FOR ADDITIVE MANUFACTURING 9
Efrain Rodriguez, Alberto Alvares

ADDITIVE MANUFACTURING OF PLA/HNT NANOCOMPOSITES FOR BIOMEDICAL APPLICATIONS 17
Chaitra Venkatesh, Evert Fuenmayor, Patrick Doran, Ian Major, Declan M Devine

AUTONOMOUS PREFORMING SYSTEM: AUTOMATED AND SENSOR-AIDED HANDLING OF DRY CARBON FIBRE TEXTILES 25
C. Frommel, M. Körber, M. Mayer, A. Schuster, L. Larsen

CHARACTERIZATION OF 3D-PRINTED CAPACITORS CREATED BY FUSED FILAMENT FABRICATION USING ELECTRICALLY-CONDUCTIVE FILAMENT 33
Nebojsa I. Jaksic, Pratik D. Desai

GENERATION OF OPTIMIZED VORONOI BASED INTERIOR STRUCTURES FOR IMPROVED MECHANICAL PROPERTIES 42
Anıl Can Öncel, Ulas Yaman

INVESTIGATION OF VARIABLE BEAD WIDTHS IN FFF PROCESS 52
Bahar Gharehpapagh, Melik Dolen, Ulas Yaman

USING ADDITIVE MANUFACTURING TO PRODUCE INJECTION MOULDS SUITABLE FOR SHORT SERIES PRODUCTION 60
Conor Whlean, Con Sheahan

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

FRAMEWORK FOR SELECTION OF ERP SYSTEM: CASE STUDY 69
O Alaskari, R. Pinedo-Cuenca, M.M. Ahmad

HUMAN-ROBOT COLLABORATIVE RECONFIGURABLE PLATFORM FOR SURFACE FINISHING PROCESSES 76
Fabio Pini, Francesco Leali

MACHINE LEARNING AND PROCESS MINING APPLIED TO PROCESS OPTIMIZATION: BIBLIOMETRIC AND SYSTEMIC ANALYSIS 84
Ederson Carvalhar Fernandes, Barry Fitzgerald, Liam Brown, Milton Borsato

A TAILORED MAINTENANCE MANAGEMENT SYSTEM TO CONTROL SPARE PARTS LIFE CYCLE 92
R. Accorsi, A. Gallo, A. Tufano, M. Bortolini, R. Manzini

DATA-DRIVEN PREDICTION MODEL OF COMPONENTS SHIFT DURING REFLOW PROCESS IN SURFACE MOUNT TECHNOLOGY 100
Irandokht Parviziomran, Shun Cao, Haeyong Yang, Seungbae Park, Daehan Won

DYNAMIC PREDICTIVE MODELING OF SOLDER PASTE VOLUME WITH REAL TIME MEMORY UPDATE IN A STENCIL PRINTING PROCESS 108
Hongya Lu, Haifeng Wang, Sang Won Yoon, Daehan Won, Seungbae Park

OPTIMIZING THE HARDNESS OF SLA PRINTED OBJECTS BY USING THE NEURAL NETWORK AND GENETIC ALGORITHM 117
Guang Hu, Zhi Cao, Michael Hopkins, Conor Hayes, Declan M Devine

AUTOMATIC PROCESS MODELING WITH TIME DELAY NEURAL NETWORK BASED ON LOW-LEVEL DATA. 125
Giovanni Menegozzo, Diego Dall'Alba, Andrea Roberti, Paolo Fiorini

DIGITALIZED AUTOMATED WELDING SYSTEMS FOR WELD QUALITY PREDICTIONS AND RELIABILITY 133
Emmanuel Afrane Gyasi, Paul Kah, Sakari Penttilä, Juho Ratava, Lin Sanbao

OBJECT DETECTION USING CONVOLUTIONAL NEURAL NETWORKS FOR SMART MANUFACTURING VISION SYSTEMS IN THE MEDICAL DEVICES SECTOR 142
Kelly O'Brien, Jacqueline Humphries
INTELLIGENT INJECTION CURING OF BACON 148
Mark P. Philipsen, Thomas B. Moeslund
INTELLIGENT PROCESS PLANNING FOR SMART MANUFACTURING SYSTEMS: A STATE-OF-THE-ART REVIEW 156
Hossein Besharati-Foumani, Mika Lohtander, Juha Varis
MULTI-OBJECTIVE OPTIMIZATION APPROACH TO ENHANCE THE STENCIL PRINTING QUALITY 163
Nourma Khader, Jaehwan Lee, Duk Lee, Sang Won Yoon, Haeyong Yang
SELF-LEARNING PROCESSES IN SMART FACTORIES: DEEP REINFORCEMENT LEARNING FOR PROCESS CONTROL OF ROBOT BRINE INJECTION 171
Rasmus E. Andersen, Steffen Madsen, Alexander B.K. Barlo, Sebastian B. Johansen, Simon Bøgh
EDGE COMPUTING APPLIED TO INDUSTRIAL MACHINES 178
Anderson Carvalho, Niall O' Mahony, Lenka Krpalkova, Sean Campbell, Pat Doody
ONE-SHOT LEARNING FOR CUSTOM IDENTIFICATION TASKS; A REVIEW 186
N. O' Mahony, Sean Campbell, Anderson Carvalho, L. Krpalkova, J. Walsh
PRODUCTION FLOW CONTROL THROUGH THE USE OF REINFORCEMENT LEARNING 194
Tomé Silva, Américo Azevedo

ARTIFICIAL INTELLIGENCE, MACHINE LEARNING AND INDUSTRY 4.0

DEVELOPMENT OF INVERS KINEMATIC METHOD FOR 6-DOF PARALLEL ROBOT USING ANALYTICAL APPROACH 203
Hendriko Hendriko
METHODS AND CONCEPTS FOR ELABORATING A DECISION AIDED TOOL FOR OPTIMIZING HEALTHCARE MEDICINES DISPATCHING FLOWS 209
Julia Cassim Pinheiro, Paul-Eric Dossou, Joao Chang Junior
STATISTICAL ANALYSIS FOR COMPONENT SHIFT IN PICK AND PLACE PROCESS OF SURFACE MOUNT TECHNOLOGY 217
Shun Cao, Irandokht Parviziomran, Seungbae Park, Daehan Won
TOWARDS A ROBOT SIMULATION FRAMEWORK FOR E-WASTE DISASSEMBLY USING REINFORCEMENT LEARNING 225
Christoffer B. Kristensen, Frederik A. Sørensen, Hjalte B. Nielsen, Martin S. Andersen, Simon Bøgh

BIG DATA ANALYTICS IN MANUFACTURING AND SERVICES

A DEEP LEARNING APPROACH FOR ANOMALY DETECTION WITH INDUSTRIAL TIME SERIES DATA: A REFRIGERATORS MANUFACTURING CASE STUDY 233
Mattia Carletti, Chiara Masiero, Alessandro Beghi, Gian Antonio Susto
APPLICATION OF LEAN MANUFACTURING IN CONSTRUCTION MANAGEMENT 241
Filipe d'S. Aureliano, Ariellen Ap. F. Costa, Ivan F. Júnior, Roger A. Rodrigues
DEEP LEARNING-BASED PRODUCTION FORECASTING IN MANUFACTURING: A PACKAGING EQUIPMENT CASE STUDY 248
Luca Brunelli, Chiara Masiero, Diego Tosato, Alessandro Beghi, Gian Antonio Susto
INVENTORY MANAGEMENT AND COST REDUCTION OF SUPPLY CHAIN PROCESSES USING AI BASED TIME-SERIES FORECASTING AND ANN MODELING 256
Umamaheswaran Praveen, Ganjeizadeh Farnaz, Ghasib Hatim

BIOMANUFACTURING, BIOMATERIALS AND BIOTECHNOLOGIES

EVALUATION OF THE EXTENDED FINITE ELEMENT METHOD FOR THE ANALYSIS OF BONDED JOINTS WITH DIFFERENT GEOMETRIES 264
V. Ramesh, R.D.S.G. Campilho, F.J.G. Silva, R.J.B. Rocha, S. Kumar
FRAMEWORK FOR ASSESSMENT OF OIL SPILL SITE REMEDIATION OPTIONS IN DEVELOPING COUNTRIES A LIFE CYCLE PERSPECTIVE. 272
Obiageli S. Ugwuoke, Chike F Oduoza

REFINING EARLY STAGE INTERVENTIONAL COMPOSITE CATHETER DESIGN 282
Sean Lynn, Philip O'Malley, David Tanner, Sean Moore
SELF-DESCRIPTION OF CYBER-PHYSICAL PRODUCTION MODULES FOR A PRODUCT-DRIVEN MANUFACTURING SYSTEM 291
Jesko Hermann, Pascal Rübel, Max Birtel, Florian Mohr, Martin Ruskowski

CELLULAR MANUFACTURING DESIGN AND CONTROL

OPTIMAL NUMBER OF CELLS FOR A PART FAMILY IN A STOCHASTIC DEMAND ENVIRONMENT 299
Omar Alhawari, Gürsel Süer
CELLULAR DEMANUFACTURING LAYOUT IN A RAIL INDUSTRY: END-OF- LIFE COMPONENTS REUSABILITY 307
Humbulani Simon Phuluwa, Khumbulani Mpofu, Johh Alfred Trimble
THE IMPACT OF LEAN IMPROVEMENTS ON COST-TIME PROFILE 316
Danijela Gračanin, Danijela Ćirić, Bojan Lalić, Jelena Ćurčić, Nemanja Tasić
DESIGNING A NOVEL AND GREENER TRUCK ASPHALT CONTAINER 324
P.V. Lopes, F.J.G. Silva, R.D.S.G. Campilho, F. de Almeida

COLLABORATIVE ROBOTICS IN SMART MANUFACTURING

A DUAL-ARM COLLABORATIVE ROBOT SYSTEM FOR THE SMART FACTORIES OF THE FUTURE 333
Jens F. Buhl, Rune Grønhøj, Jan K. Jørgensen, Guilherme Mateus, Dimitrios Chrysostomou
AN APPLICATION OF COLLABORATIVE ROBOTS IN A FOOD PRODUCTION FACILITY 341
R. Accorsi, A. Tufano, A. Gallo, F.G. Galizia, R. Manzini
A ROS2 BASED COMMUNICATION ARCHITECTURE FOR CONTROL IN COLLABORATIVE AND INTELLIGENT AUTOMATION SYSTEMS 349
Endre Erős, Martin Dahl, Kristofer Bengtsson, Atieh Hanna, Petter Falkman
AN EVALUATION METHODOLOGY FOR THE CONVERSION OF MANUAL ASSEMBLY SYSTEMS INTO HUMAN-ROBOT COLLABORATIVE WORKCELLS 358
Luca Gualtieri, Erwin Rauch, Renato Vidoni, Dominik T. Matt
DISTRIBUTED SOFTWARE ARCHITECTURE FOR AGVS FOR SEPARATION OF DYNAMIC AND STATIC OBSTACLES 367
Michael Scholz, Markus Lieret, Marc Bigott, Jörg Franke
HUMAN-ROBOT COLLABORATION AS A NEW PARADIGM IN CIRCULAR ECONOMY FOR WEEE MANAGEMENT 375
Arantxa Renteria, Esther Alvarez-de-los-Mozos
TOWARDS THE DEMOCRATISATION OF DESIGN: THE IMPLEMENTATION OF METAHEURISTIC SEARCH STRATEGIES TO ENABLE THE AUTO-ASSIGNMENT OF MANUFACTURING PARAMETERS FOR FDM 383
Mark Goudswaard, Aydin Nassehi, Ben Hicks
UNIVERSAL INDUSTRIAL INTERFACE - MOBILE 391
Andreea Ciontos, Ioan-Matei Sarivan, Casper Schou
THE MOBILE ROBOT ANTI-DISTURBANCE VSLAM NAVIGATION ALGORITHM BASED ON RBF NEURAL NETWORK 400
S.F. Wong, Z. Yu
OBJECT RECOGNITION WITHIN SMART MANUFACTURING 408
Andrew D O' Riordan, Daniel Toal, Thomas Newe, Gerard Dooly
INSTRUMENTED TOOL BASED ROBOT PROGRAMMING - PARAMETERIZATION OF SCREWING PROCESS MACROS 415
Markus Ikeda, Markus Ganglbauer, Prateek Ashok, Srinivas Maddukuri, Andreas Pichler

DESIGN AND MANUFACTURING OF PERSONALISED PRODUCTS

BÉZIER CURVE BASED CONTINUOUS AND SMOOTH MOTION PLANNING FOR SELF-LEARNING INDUSTRIAL ROBOTS 423
Christian Scheiderer, Timo Thun, Tobias Meisen

A CONCEPTUAL FRAMEWORK FOR CYBER-PHYSICAL SYSTEM IN CONNECTED RSW WELDABILITY CERTIFICATION 431
Fahim Ahmed, Noor-E Jannat, Saeed Z. Gavidel, Jeremy Rickli, Kyoung-Yun Kim
AN FNLP APPROACH FOR PLANNING ENERGY-EFFICIENT MANUFACTURING: WAFER FABRICATION AS AN EXAMPLE 439
Yi-Chi Wang, Tin-Chih Toly Chen
A BOOSTING-BASED INTELLIGENT MODEL FOR STENCIL CLEANING PREDICTION IN SURFACE MOUNT TECHNOLOGY 447
Haifeng Wang, Hongya Lu, Daehan Won, Sang Won Yoon, Krishnaswami Srihari
TOWARDS THE DEVELOPMENT OF INTERFACES FOR STUDENTS WITH SPEECH DISORDER AND MOTOR IMPAIRMENTS 455
Francesco Davide Cascone, Massimo Martorelli, Antonio Gloria, Stefano Papa, Antonio Lanzotti
MANUFACTURE OF STRUCTURAL BLOCKS OF CONCRETE WITH WASTE TIRE RUBBERS 464
Filipe d'S. Aureliano, Ariellen Ap. F. Costa, Ivan F. Júnior, Rafael d' O. Pedroso
FROM EGOSYSTEM TO ECOSYSTEM: HOW A 150-YEAR OLD MANUFACTURING FIRM IS TAKING ON THE WORLD OF INTERNET OF THINGS 471
Victor Centerholt, Sandra Mattsson, Frank Rälg
USING SERIOUS GAMES TO INFORM MASS CUSTOMIZATION PRODUCTION METHODS FROM THE FUZZY FRONT-END OF NEW PRODUCT DEVELOPMENT 478
Michael O'Sullivan, Con Sheahan

DIGITAL CYBER AND CLOUD MANUFACTURING

AN AUTOMATIC PROCEDURE BASED ON VIRTUAL ERGONOMIC ANALYSIS TO PROMOTE HUMAN-CENTRIC MANUFACTURING 488
Grandi Fabio, Peruzzini Margherita, Zanni Luca, Pellicciari Marcello
QUALITY ASSURANCE AND PROCESS CONTROL IN VIRTUAL REALITY 497
J. Ratava, S. Penttilä, H. Lund, M. Lohtander, J. Varis
SIMULATION BASED DRAPING OF DRY CARBON FIBRE TEXTILES WITH COOPERATING ROBOTS 505
A. Schuster, C. Frommel, D. Deden, L. Brandt, L. Larsen
ON SEMANTIC INTEROPERABILITY OF MODEL-BASED DEFINITION OF PRODUCT DESIGN 513
Arkopaul Sarkar, Dušan Šormaz
EXPLORATION OF TWO SAFETY STRATEGIES IN HUMAN-ROBOT COLLABORATIVE MANUFACTURING USING VIRTUAL REALITY 524
George-Christopher Vosniakos, Lucas Ouillon, Elias Matsas
CYBERSECURITY CONCERNS FOR TOTAL PRODUCTIVE MAINTENANCE IN SMART MANUFACTURING SYSTEMS 532
Alireza Zarreh, HungDa Wan, Yooneun Lee, Can Saygin, Rafid Al Janahi
STEPS TOWARDS DIGITIZATION OF MANUFACTURING IN AN SME ENVIRONMENT 540
Frank Doyle, John Cosgrove
A MAAS PLATFORM ARCHITECTURE SUPPORTING DATA SOVEREIGNTY IN SUSTAINABILITY ASSESSMENT OF MANUFACTURING SYSTEMS 548
Giuseppe Landolfi, Andrea Barni, Gabriele Izzo, Alessandro Fontana, Andrea Bettoni

ENGINEERING AND MANUFACTURING METHODS AND TOOLS FOR INDUSTRY 4.0

A DIMENSION REDUCTION METHOD FOR EFFICIENT OPTIMIZATION OF MANUFACTURING PERFORMANCE 556
Ananda Chakraborti, Hari P.N. Nagarajan, Suraj Panicker, Hossein Mokhtarian, Kari T. Koskinen
FLEXIBLE CALIBRATION OF A STEREO VISION SYSTEM BY ACTIVE DISPLAY 564
Sandro Barone, Paolo Neri, Alessandro Paoli, Armando Viviano Razionale
DEVELOPMENT OF A NEW FRAMEWORK FOR IMPLEMENTING INDUSTRY 4.0 IN COMPANIES 573
Paul-Eric Dossou
A DYNAMIC PROGRAMMING MODEL FOR DESIGNING A QUALITY CONTROL PLAN IN A MANUFACTURING PROCESS 581
Eusébio Nunes, Sérgio Sousa

RECONFIGURATION PROTOCOLS FOR EMBEDDED AGENTS IN WIRELESS CONTROL NETWORKS 589
Mohammed S. Taboun, Robert W. Brennan
RECONFIGURABLE INSPECTION ROBOT FOR INDUSTRIAL APPLICATIONS 597
A. Pistone, C. Canali, C. Gloriani, S. Leggieri, D.G. Caldwell
RISK ASSESSMENT FOR CYBER SECURITY OF MANUFACTURING SYSTEMS: A GAME THEORY APPROACH 605
Alireza Zarreh, HungDa Wan, Yooneun Lee, Can Saygin, Rafid Al Janahi
A DMS TO SUPPORT INDUSTRIAL PROCESS DECISION-MAKING: A CONTRIBUTION UNDER INDUSTRY 4.0 613
M.T. Pereira, A. Silva, L.P. Ferreira, J.C. Sá, F.J.G. Silva

PART 2

ASSESSMENT OF INNOVATIVENESS LEVEL FOR CHOSEN SOLUTIONS RELATED TO LOGISTICS 4.0 621
Mariusz Kostrzewski, Monika Kosacka-Olejnik, Karolina Werner-Lewandowska
STATIC STRENGTH IMPROVEMENT OF TUBULAR ALUMINIUM ADHESIVE JOINTS BY THE OUTER CHAMFERING TECHNIQUE 629
L.R.F. Ferreira, R.D.S.G. Campilho, D.R. Barbosa, R.J.B. Rocha, F.J.G. Silva
A STRATEGIC MODEL TO TAKE THE FIRST STEP TOWARDS INDUSTRY 4.0 IN SMES 637
B. Pinto, F.J.G. Silva, T. Costa, R.D.S.G. Campilho, M.T. Pereira
A REVIEW OF INTEROPERABILITY STANDARDS FOR INDUSTRY 4.0. 646
Thomas Burns, John Cosgrove, Frank Doyle

ENGINEERING EDUCATION

A SIMPLIFIED CHANGEABLE LEARNING FACTORY DESIGN BASED ON A GRANULARITY COMPLEXITY MODEL 654
Tarek AlGeddawy
A MULTIPURPOSE SMALL-SCALE SMART FACTORY FOR EDUCATIONAL AND RESEARCH ACTIVITIES 663
Andrea Ferrario, Matteo Confalonieri, Andrea Barni, Gabriele Izzo, Paolo Pedrazzoli
DIVERSITY IN ENGINEERING STUDENTS: DO THEY HAVE DIFFERENT EXPECTATIONS OF THEIR LEARNING EXPERIENCE? 671
Nancy Nelson, Robert W. Brennan
DEVELOPING CDIO PRACTITIONERS: A SYSTEMATIC APPROACH TO STANDARD 10 680
Jason Power, David Tanner, Alan Ryan, Brian Devitt
NEW MOTION CONTROL MACHINE ELEMENTS REPRESENTATION FOR MECHATRONIC EDUCATION 686
Julio Garrido Campos, David Santos Esterán
DIMENSIONAL ANALYSIS 694
John F. Mahoney, Sencer Yeralan
SURVEY ON ARTIFICIAL INTELLIGENCE (AI) APPLIED IN WELDING: A FUTURE SCENARIO OF THE INFLUENCE OF AI ON TECHNOLOGICAL, ECONOMIC, EDUCATIONAL AND SOCIAL CHANGES 702
Emmanuel Afrane Gyasi, Heikki Handroos, Paul Kah
DESIGNING A NOVEL SYSTEM FOR THE INTRODUCTION OF LUBRICANT IN CONTROL CABLES FOR THE AUTOMOTIVE INDUSTRY 715
R. Ribeiro, F.J.G. Silva, A.G. Pinto, R.D.S.G. Campilho, H.A. Pinto

ENTERPRISE KNOWLEDGE MANAGEMENT

PROCESS SEQUENCING FOR FEATURES WITH MULTIPLE PROCESSING REQUIREMENTS 726
Dušan Šormaz, Arkopaul Sarkar
HIDDEN PRODUCT KNOWLEDGE: PROBLEMS AND POTENTIAL SOLUTIONS 735
Lauri Jokinen, Simo-Pekka Leino

APPLICATION OF THE A3 METHODOLOGY FOR THE IMPROVEMENT OF AN ASSEMBLY LINE 745
J. Pereira, F.J.G. Silva, J.A. Bastos, L.P. Ferreira, J.C.O. Matias
MAPPING OCCUPATIONAL HEALTH AND SAFETY MANAGEMENT SYSTEMS IN PORTUGAL: OUTLOOK FOR ISO 45001:2018 ADOPTION 755
L. Morgado, F.J.G. Silva, L.M. Fonseca

INNOVATIVE MANUFACTURING PROCESSES

THE IMPACT OF THE APPLICATION OF LEAN TOOLS FOR IMPROVEMENT OF PROCESS IN A PLASTIC COMPANY: A CASE STUDY 765
P. Ribeiro, J.C. Sá, L.P. Ferreira, F.J.G. Silva, G. Santos
A FUZZY-BASED APPROACH TO IMPROVE THE HUMAN PICK-TO-LIGHT EFFICIENCY INCORPORATED WITH ROBOTS BEHAVIOR IN AN INTELLIGENT DISTRIBUTION CENTER 776
Teng-Sheng Su, Su-Shiang Lee, Wei-Hsun Hsu, Shan-Heng Fu
RE-DESIGN OF A PACKAGING MACHINE EMPLOYING LINEAR SERVOMOTORS: A DESCRIPTION OF MODELLING METHODS AND ENGINEERING TOOLS 784
Giovanni Berselli, Pietro Bilancia, Luca Bruzzone, Pietro Fanghella
SIMULATOR OF AN ADDITIVE AND SUBTRACTIVE TYPE OF HYBRID MANUFACTURING SYSTEM 792
Ugur M Dilberoglu, Vahid Haseltalab, Ulas Yaman, Melik Dolen

INNOVATIVE MANUFACTURING SYSTEMS

APPLICATION OF MULTIVARIATE STATISTICAL ANALYSIS FOR CNC MILLING OF LARGE TI-6AL-4V COMPONENTS 800
L. Asensio Dominguez, A. Shokrani, J.M. Flynn, V. Dhokia, S.T. Newman
AUTOMATED PLANNING AND OPTIMIZATION OF A DRAPING PROCESSES WITHIN THE CATIA ENVIRONMENT USING A PYTHON SOFTWARE TOOL 808
M. Körber, C. Frommel
ASSESSMENT OF METAL CUTTING TOOLS USING COST PERFORMANCE RATIO AND TOOL LIFE ANALYSES 816
Daniel Johansson, Rebecka Lindvall, Christina Windmark, Rachid M'Saoubi, Jan-Eric Ståhl
LOW-COST 3D SCANNING IN A SMART LEARNING FACTORY 824
Christian P. Nielsen, Ali A. Malik, David G. Hansen, Arne Bilberg

INNOVATIVE MANUFACTURING SYSTEMS AND SERVICES

INSUFFICIENT KNOWLEDGE IN INDUSTRIAL DIGITALIZATION – PROMISING PERSPECTIVE FROM FEMALE SUPPLIERS 832
Sandra Mattsson, Victor Centerholt, Peter Bryntesson, Gabriella Banehag
REMOTE ACOUSTIC ANALYSIS FOR TOOL CONDITION MONITORING 840
James Coady, Daniel Toal, Thomas Newe, Gerard Dooly
A NOVEL CONCEPT OF A CONDUIT TRANSPORT SYSTEM 848
P.R. Santos, F.J.G. Silva, R.D.S.G. Campilho, G.F.L. Pinto, A. Baptista
IDENTIFICATION OF RESOURCES AND PARTS IN A PLUG AND PRODUCE SYSTEM USING OPC UA 858
Mattias Bennulf, Fredrik Danielsson, Bo Svensson
ROBOT-ASSISTED CONCEPT FOR ASSEMBLING FORM COILS IN LAMINATED STATOR CORES OF LARGE ELECTRIC MOTORS 866
Alexander Mahr, Andreas Mayr, Timo Jung, Jörg Franke
RETHINKING MODULAR JIGS' DESIGN REGARDING THE OPTIMIZATION OF MACHINING TIMES 876
S. Kumar, R.D.S.G. Campilho, F.J.G. Silva
SITUATIONAL COGNITIVE ASSISTANCE SYSTEM IN REWORK AREA 884
Rainer Müller, Leenhard Hörauf, Christoph Speicher, Attique Bashir

LEAN AND AGILE MANUFACTURING

OPTIMIZATION OF THE COLD PROFILING PROCESS THROUGH SMED 892
T. Vieira, J.C. Sá, M.P. Lopes, G. Santos, M.T. Pereira

INTERACTIONS OF LEAN ENABLERS IN MANUFACTURING SMES USING INTERPRETIVE STRUCTURAL MODELLING APPROACH - A CASE STUDY OF KRI 900
I.S. Mohammad, C.F. Oduoza

A TPM STRATEGY IMPLEMENTATION IN AN AUTOMOTIVE PRODUCTION LINE THROUGH LOSS REDUCTION 908
M.D.O. dos Reis, R. Godina, C. Pimentel, F.J.G. Silva, J.C.O. Matias

SIMULATION OF THE STOCHASTIC ONE-DIMENSIONAL CUTTING STOCK PROBLEM TO MINIMIZE THE TOTAL INVENTORY COST 916
Hüseyin Sarper, Nebojsa I. Jaksic

PROCESS IMPROVEMENT IN THE METALLIC MESH CUTTING OPERATION ASSOCIATED TO TIRE MANUFACTURING 924
J.C.M de Sousa, R.D.S.G. Campilho, F.J.G. Silva, P.M.M. dos Santos

SCREWING PROCESS ANALYSIS USING MULTIVARIATE STATISTICAL PROCESS CONTROL 932
Humberto Nuno Teixeira, Isabel Lopes, Ana Cristina Braga, Pedro Delgado, Cristina Martins

COMPARISON OF DIFFERENT TEST CONFIGURATIONS FOR THE SHEAR FRACTURE TOUGHNESS EVALUATION OF A DUCTILE ADHESIVE 940
A.J.S. Leal, R.D.S.G. Campilho, F.J.G. Silva, D.F.O. Silva, F.J.P. Moreira

LEAN AND SIX SIGMA

THE WAY LEAN STARTS – A DIFFERENT APPROACH TO INTRODUCE LEAN CULTURE AND CHANGING PROCESS WITH PEOPLE'S INVOLVEMENT 948
RF Mascarenhas, C Pimentel, MJ Rosa

SUPPORT METHODOLOGY FOR PRODUCT QUALITY ASSURANCE: A CASE STUDY IN A COMPANY OF THE AUTOMOTIVE INDUSTRY 957
T.A. Cepeda, I.S. Lopes

IMPROVING IN-PLANT LOGISTICS FLOW BY PHYSICAL AND DIGITAL PATHWAYS 965
T. Tellini, F.J.G. Silva, T. Pereira, L. Morgado, L.P. Ferreira

IMPLEMENTATION OF LEAN METHODOLOGIES IN THE MANAGEMENT OF CONSUMABLE MATERIALS IN THE MAINTENANCE WORKSHOPS OF AN INDUSTRIAL COMPANY 975
Tomé Pombal, Luís Pinto Ferreira, J.C. Sá, Maria Teresa Pereira, F.J.G. Silva

MANUFACTURING ERGONOMICS AND HUMAN FACTORS

INTELLIGENT MATERIAL SUPPLY SUPPORTING ASSISTIVE SYSTEMS FOR MANUAL WORKING STATIONS 983
Patrick Bertram, William Motsch, Pascal Rübel, Martin Ruskowski

DESIGN OF A MODULAR SOLUTION FOR AN AUTONOMOUS VEHICLE FOR CARGO TRANSPORT AND HANDLING 991
H.D.B.C.L. de Oliveira, R.D.S.G. Campilho, F.J.G. Silva

FUTUREFIT: A STRATEGY FOR GETTING A PRODUCTION ASSET TO AN INDUSTRY 4.0 COMPONENT – A HUMAN-CENTERED APPROACH 1000
Max Birtel, Alexander David, Jesko Hermann, Florian Mohr, Martin Ruskowski

AN EXAMINATION OF WATER QUALITY ENTERING IRISH DAIRY PROCESSORS 1008
E. O'Connor, A. Ryan, P. Cronin

DEVELOPMENT OF A DLP 3D PRINTER FOR ORTHODONTIC APPLICATIONS 1017
Sandro Barone, Paolo Neri, Alessandro Paoli, Armando V. Razionale, Francesco Tamburrino

THE ANALYSIS OF TOOL WEAR MECHANISMS IN THE MACHINING OF PRE-SINTERED ZIRCONIA DENTAL CROWNS 1026
David Irvine, Wan Tsin Goh, Farid Dailami, Jason Matthews

USING LEAN MANUFACTURING AND MACHINE LEARNING FOR IMPROVING MEDICINES PROCUREMENT AND DISPATCHING IN A HOSPITAL 1034
Kaio Jordon, Paul-Eric Dossou, Joao Chang Junior

MANUFACTURING OPERATIONS, SUPPLY CHAIN AND LOGISTICS

MATHEMATICAL MODELLING OF PRODUCTS ALLOCATION TO CUSTOMERS FOR SEMICONDUCTOR SUPPLY CHAIN 1042
Behrouz Alizadeh Mousavi, Radhia Azzouz, Cathal Heavey

REDUCTION OF SCRAP PERCENTAGE OF CAST PARTS BY OPTIMIZING THE PROCESS PARAMETERS 1050
R. Chandrasekaran, R.D.S.G. Campilho, F.J.G. Silva

LOGISTICS 4.0 MATURITY IN SERVICE INDUSTRY: EMPIRICAL RESEARCH RESULTS 1058
Karolina Werner-Lewandowska, Monika Kosacka-Olejnik

THERE IS LOGIC IN LOGIT – INCLUDING WEAR RATE IN COLDING'S TOOL WEAR MODEL 1066
Sampsa V.A. Laakso, Daniel Johansson

IMPROVING EFFICIENCY IN A HYBRID WAREHOUSE: A CASE STUDY 1074
Andreia M. Freitas, F.J.G. Silva, L.P. Ferreira, J.C. Sá, J. Pereira

DEVELOPMENT OF A DIGITAL PERFORMANCE ASSESSMENT MODEL FOR QUEBEC MANUFACTURING SMES 1085
Sébastien Gamache, Georges Abdul-Nour, Chantal Baril

AUTOMATIC GENERATION OF DIGITAL TWIN INDUSTRIAL SYSTEM FROM A HIGH LEVEL SPECIFICATION 1095
Julio Garrido Campos, Juan Sáez López, José Ignacio Armesto Quiroga, Angel Manuel Espada Seoane

MANUFACTURING PROCESSES AND TECHNOLOGY

REAL-TIME MANUFACTURING OPTIMIZATION WITH A SIMULATION MODEL AND VIRTUAL REALITY 1103
Ojstersek Robert, Palcic Iztok, Buchmeister Borut

IMPROVING THE CUT SURFACE QUALITY BY OPTIMIZING PARAMETERS IN THE FIBRE LASER CUTTING PROCESS 1111
I. Amaral, F.J.G. Silva, G.F.L. Pinto, R.D.S.G. Campilho, R.M. Gouveia

INFLUENCE OF THE NATURAL ADDITIVE ON NATURAL FIBER REINFORCED THERMOPLASTIC COMPOSITE 1121
D.K. Selvaraj, F.J.G. Silva, R.D.S.G. Campilho, A. Baptista, G.F.L. Pinto

DEVELOPMENT OF THE CONSTRUCTION SCHEDULING BASED ON FUZZY DISCRETE EVENT SIMULATION FOR A TFT-LCD PLANT 1130
Teng-Sheng Su, Luh-Maan Chang

IMPACT OF CONFORMAL COATING MATERIAL ON THE LONG-TERM RELIABILITY OF BALL GRID ARRAY SOLDER JOINTS 1138
Abid-Alrahman Fawzi Abbas, Christopher M. Greene, Krishnaswami Srihari, Daryl Santos, Ganesh Pandiarajan

CHALLENGES IN RIVETING QUALITY PREDICTION: A LITERATURE SURVEY 1143
Kyoung-Yun Kim, Jaemun Sim, Noor-E Jannat, Fahim Ahmed, Sattar Ameri

EXPERIENCES AND EXPECTATIONS OF COLLABORATIVE ROBOTS IN INDUSTRY AND ACADEMIA: BARRIERS AND DEVELOPMENT NEEDS 1151
Iina Aaltonen, Timo Salmi

A NOVEL METHOD USING DS-MCM FOR EQUIPMENT HEALTH PROGNOSIS WITH PARTIALLY OBSERVED INFORMATION 1159
Qinming Liu, Ming Dong, F. Frank Chen, Yongpeng Li, Haoxiang Wang

MANUFACTURING SYSTEM DESIGN AND ANALYSIS

CONSUMER IMPACT ON SUPPLY CHAIN SUSTAINABILITY 1167
Zlatan Mujkić, Saranda Gashi, Šehida Hamidović

DEVELOPING KNOWLEDGE ON DIGITAL MANUFACTURING TO DIGITAL TWIN: A BIBLIOMETRIC AND SYSTEMIC ANALYSIS 1174
Suewellyn Krüger, Milton Borsato

PROJECT MANAGEMENT DURING THE INDUSTRY 4.0 IMPLEMENTATION WITH RISK FACTOR ANALYSIS 1181
Martin Hirman, Andrea Benesova, Frantisek Steiner, Jiri Tupa

COMPARATIVE EVALUATION OF ADHESIVELY-BONDED SINGLE-LAP AND STEPPED-LAP JOINTS 1189
J.O.S. Silva, R.D.S.G. Campilho, R.J.B. Rocha, F.J.G. Silva
MATHEMATICAL MODEL FOR MAINTENANCE PLANNING OF MACHINE TOOLS 1197
C.R. Pires, I.S. Lopes, L.P. Basto
INTEGRATED INSPECTION SYSTEM STEP-COMPLIANT FOR THE EXCHANGE OF DIMENSIONAL METROLOGY DATA 1205
Cristhian I. Riaño Jaimes, Alberto J. Alvares
USING OPEN-SOURCE MICROCONTROLLERS TO ENABLE DIGITAL TWIN COMMUNICATION FOR SMART MANUFACTURING 1213
E.P. Hinchy, N.P. O'Dowd, C.T. McCarthy
LOCALIZATION SYSTEM FOR OPTIMIZATION OF PICKING IN A MANUAL WAREHOUSE 1220
M.T. Pereira, J.M.C. Sousa, L.P. Ferreira, J.C. Sá, F.J.G. Silva
ADVANCES IN MACHINE VISION FOR FLEXIBLE FEEDING OF ASSEMBLY PARTS 1228
Ali Ahmad Malik, Martin Vejling Andersen, Arne Bilberg

PART 3

NANOFILLERS CAN BE USED TO ENHANCE THE THERMAL CONDUCTIVITY OF COMMERCIALLY AVAILABLE SLA RESINS 1236
Guang Hu, Zhi Cao, Michael Hopkins, John G Lyons, Declan M Devine
EFFECT OF MATERIAL HYBRIDIZATION ON THE STRENGTH OF SCARF ADHESIVE JOINTS 1244
D.L. Alves, R.D.S.G. Campilho, R.D.F. Moreira, F.J.G. Silva, M.G. Cardoso
FRACTURE ENVELOPE ESTIMATION OF A STRUCTURAL ADHESIVE BY DEDICATED FRACTURE TESTS 1252
F.A.A. Nunes, R.D.S.G. Campilho, M.G. Cardoso, F.J.G. Silva
PREDICTING REMAINING LIFETIME USING THE MONOTONIC GAMMA PROCESS AND BAYESIAN INFERENCE FOR MULTI-STRESS CONDITIONS 1260
Shah Limon, Om Prakash Yadav
COMPARATIVE EVALUATION OF DIFFERENT FRACTURE TESTS FOR THE TENSILE FRACTURE TOUGHNESS OF A DUCTILE ADHESIVE 1268
J.M.D. Teixeira, R.D.S.G. Campilho, F.J.G. Silva, F.J.P. Moreira, D.F.O. Silva

MODELLING AND SIMULATION OF MANUFACTURING AND SERVICES

AUTOMATED HANDLING OF AUXILIARY MATERIALS USING A MULTI-KINEMATIC GRIPPING SYSTEM 1276
Michael Vistein, Jan Faber, Clemens Schmidt-Eisenlohr, Daniel Reiter
A BUSINESS MODEL TO IMPLEMENT CLOSED-LOOP MATERIAL FLOW IN IOT-ENABLED ENVIRONMENTS 1284
Alperen Bal, Fazleena Badurdeen
A 6-DOF HAPTIC MANIPULATION SYSTEM TO VERIFY ASSEMBLY PROCEDURES ON CAD MODELS 1292
Paolo Tripicchio, Carlo Alberto Avizzano, Massimo Bergamasco
AUTOMATED PRODUCTION OF LARGE FIBRE METAL LAMINATE AIRCRAFT STRUCTURE PARTS 1300
Michael Vistein, Dominik Deden, Roland Glück, Stefan Schneyer
CONTROL OF HVAC-SYSTEMS WITH SLOW THERMODYNAMIC USING REINFORCEMENT LEARNING 1308
C. Blad, S. Koch, S. Ganeswarathas, C.S. Kallesøe, S. Bøgh
DESIGN OF AUTOMATED EQUIPMENT FOR THE ASSEMBLY OF AUTOMOTIVE PARTS 1316
N.F.M. Veiga, R.D.S.G. Campilho, F.J.G. da Silva, P.M.M. Santos, P.V. Lopes
COMPUTATIONAL FLUID DYNAMICS (CFD): BEHAVIORAL STUDY AND OPTIMIZATION OF THE BLADES NUMBER OF A RADIAL FAN 1324
Filipe d'S. Aureliano, Luiz Carlos V. Guedes
DIGITALIZATION IN SEMICONDUCTOR MANUFACTURING- SIMULATION FORECASTER APPROACH IN MANAGING MANUFACTURING LINE PERFORMANCE 1330
Farhain Misrudin, Lee Ching Foong

PRECISION MANUFACTURING

INFLUENCE OF DYNAMIC TEMPERATURE CONTROL ON THE INJECTION MOLDING PROCESS OF PLASTIC COMPONENTS 1338
Cláudia Macedo, Cláudia Freitas, António M. Brito, Gilberto Santos, Ricardo Simoes

CREATING DETAILED SHAPES ON THE MOULDING TOOL SURFACES WITH DIFFERENT MANUFACTURING TECHNIQUES 1347
Panu Tanninen, Ville Leminen, Sami Matthews, Antti Pesonen, Juha Varis

DEXTEROUS GRIPPER FOR IN-HAND MANIPULATION WITH EMBEDDED OBJECT LOCALIZATION ALGORITHM 1354
S. Leggieri, C. Canali, A. Pistone, C. Gloriani, D.G. Caldwell

ON-MACHINE ERROR COMPENSATION FOR RIGHT FIRST TIME MANUFACTURE 1362
H.M. Eldessouky, J.M. Flynn, S.T. Newman

Development of invers kinematic method for 6-dof parallel robot using analytical approach

Hendriko Hendriko

Mechatronics Engineering Department, Politeknik Caltex Riau, Jl Umbansari, Rumbai, Pekanbaru, Provinsi Riau, 28265, Indonesia

Abstract

Study on parallel robot technology has increased over the past six decades. Parallel robot has several advantages compared to serial robot. In term of kinematic aspect, parallel robot has relatively simple calculation compared to serial robot. However, the kinematic calculation is still costly because mostly the studies in parallel robot using numerical based approach. Jacobian based method was widely used to calculate the rotation of actuator required to move the end-effector to the target position and orientation. Therefore, this study proposes an analytical based method to determine the kinematics of 6 DOF parallel robot. The end-effector was attached on the moveable platform, which is connected to the fixed platform using six independent arms. A simulation program based on the proposed algorithm was developed using Matlab. To ensure the implementability of the method, one test using a complex trajectory was performed. The result showed that the proposed algorithm could be used to calculate the rotation angle of every motor to achieve the required position of the end-effector. The implementability of the proposed method to the real 6 dof parallel robot was also tested. The verification test using two trajectories proved that the method was accurate.

Keywords: Parallel robot, end-effector, 6 dof, analytical method

1. Introduction

There are two basic architectures of robot manipulator that widely developed in industrial automation, serial robot and parallel robot. These architectures were categorized based on the kinematics chains that connect the

output of manipulator to the fixed base. Kinematics chain of serial robot was constructed by a collection of stiff beams. Serial robot has the advantages on the work volume and motion flexibility or dexterity. On the other hand, it has also several weaknesses, such as less precise, low payload ratio, and tend to produce high inertia. Another limitation of serial robot is: the algorithm of invers kinematics for determining the position and orientation of the joints is more complex.

Many studies [1-10] have been performed to develop parallel robot, including the implementation of robot to solve the industrial problems. Khalifa et al [1] developed parallel manipulator to improve endoscopy process. The developed manipulator consists of two motions, rotational and translational motion. Wu et al. [2] developed delta robot with three translational motion and one rotational motion for pick and place operation. Luo and Li [3] constructed 3 degree of freedom (dof) robot with spherical workspace. The robot was called Orthotripod. Another researcher, Ruiz et al. [4] made 3 dof CICABOT robot, which could only perform translation motion using 5 arms. There are many others research on 3 dof parallel robot that have been published [5-10], such as Delta robot [8], 3-UPU [9], and 3-PRC [10], Meanwhile Hendriko et al. [11] developed delta robot 5 dof. Numerous researches on parallel manipulator have been published, however, most of them were 3 dof to 5 dof robot. To improve the flexibility of robot motion and increase the working space, robot with higher degree of freedom is needed.

An effective and efficient method to define the invers kinematics problem is required to obtain a realistic and accurate motions. Many approaches have been developed to solve the kinematics aspect of robot. Mostly proposed numerical based approach, such as Jacobian based approach [12-15] and newton methods [16,17]. These approaches have the disadvantage on the long computational cost.

To overcome the problem of long computational time in numerical based approaches, many research [11, 18-24] have been conducted to produce analytical method in various applications, as well as to compare its computational time to other methods. The results have proven that analytical-based approach is able to decrease the computational time significantly. Hendriko et al. [11] developed analytical method called Analytical Invers Kinematics Simulation (AIKS) for 5 DOF parallel robot. They developed kinematics algorithm for parallel robot with 3 independent legs for linear motion in 3 axis and two additional actuators attached onto the moving platform to rotate the end-effector about the z-axis and the x-axis. From a series of tests, it was found that the method is accurate. A comparison test proved that AIKS was cheaper in term of computational cost than Jacobian method.

Therefore, this study developed a 6 dof parallel robot as depicted in Fig. 1(a). The robot has 6 set of arms in which each of them constructed by upper-arm and lower-arm as shown in Fig. 1(b). Every set of arms was actuated by stepper motor. An analytical algorithm was developed to define the invers kinematics aspect for calculating the orientation and position of end-effector

2. Calculating the orientation of the arms

There are six stepper motors were set at the fixed platform and they were used to actuated the upper-arm as shown in Fig. 1(b). The rotation of upper-arm was then move the lower-arm. The orientation of upper-arm and lower-arm were defined using the coordinate of the joints A_i, B_i, and C_i, where $i = 1,\dots,6$, as shown in Fig. 1(c) and Fig. 1(d). The point A_i relative to Global Coordinate Frame (GCF) is fixed, that is located at the fixed platform. Because it is fixed, then its coordinate in GCF was known. Meanwhile, the coordinate of C_i in GCF has been calculated in previous section. Therefore only the coordinate of B_i that is remaining need to be calculated. For the purpose of simplification the calculation of $B_i(x_{B_i}, y_{B_i}, z_{B_i})$, the coordinate of C_i were transformed to the Joint Coordinate Frame (JCF) at the centered point $A_i(x_i, y_i, z_i)$ as follow,

$$C_{i_J} = [M]_J . C_{i_G} \;\; ; \;\; (i = 1, \dots, 6) \tag{1}$$

C_{i_J} is the coordinate of C_{i_G} in JGF, meanwhile $[M]_J$ is the operator to transform the coordinate system from GCF to JCF, including the rotation about Z-axis (ε) and the centre displacement from E to A_i. The mapping operator was expressed as follow,

$$[M]_J = Rot(Z,\varepsilon) + A_i = \begin{bmatrix} cos\ \varepsilon & -\sin\varepsilon & 0 & x_{A_i} \\ sin\ \varepsilon & cos\ \varepsilon & 0 & y_{A_i} \\ 0 & 0 & 1 & z_{A_i} \\ 0 & 0 & 0 & 1 \end{bmatrix} \quad (2)$$

The coordinate B_{i_J} was determined by analyzing two linkages, upper-arm and lower-arm. From the upper-arm's point of view, the distance between A_{i_J} and B_{i_J} can be expressed as follow,

$$L_1^2 = \left(x_{B_{i_J}} - x_{A_{i_J}}\right)^2 + \left(y_{B_{i_J}} - y_{A_{i_J}}\right)^2 + \left(z_{B_{i_J}} - z_{A_{i_J}}\right)^2 \quad (3)$$

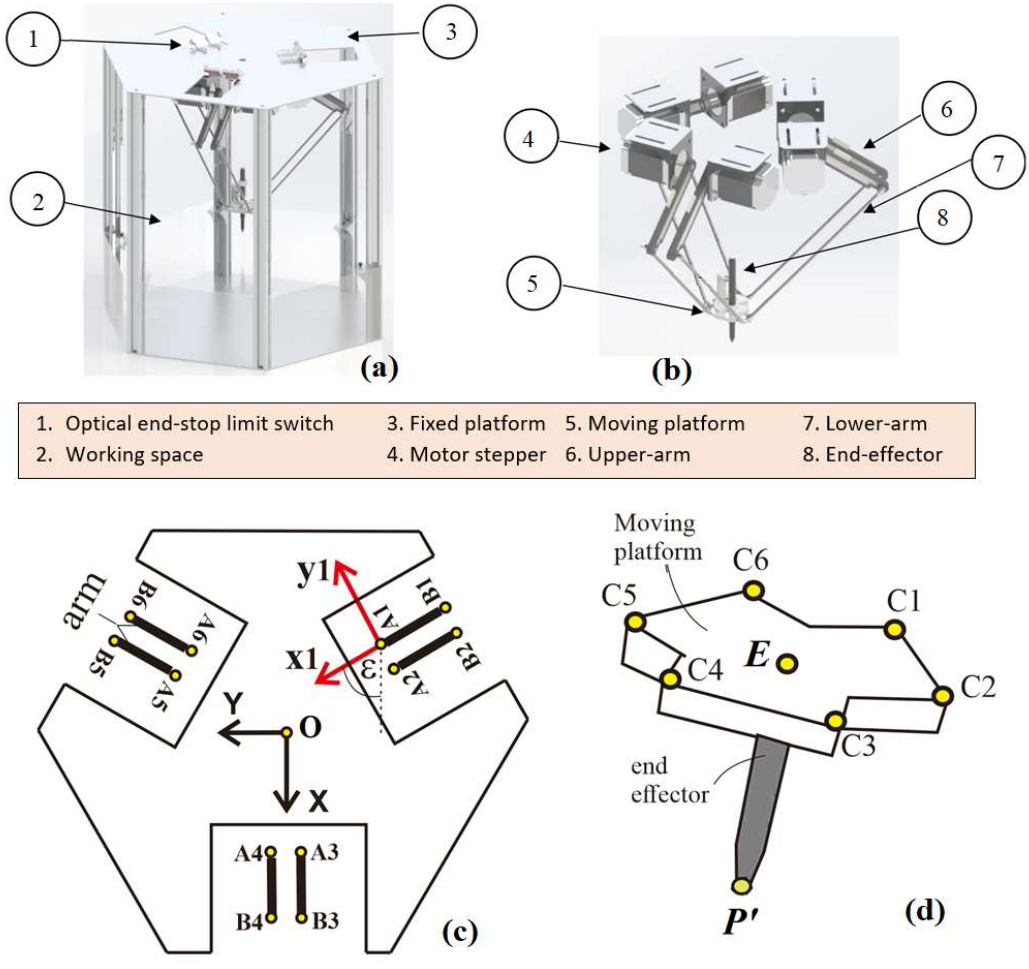

Fig. 1: a) design of parallel robot, b) robot's arms and actuator position, c) end-effector and mobile platform, d) top view of fixed platform

where L_1 is the length of upper-arm. Because the centered of JCF is located at A_{i_J}, then the coordinate of A_{i_J} become $(0,0,0)$. The *x-axis* of JCF at every joint was set align with the upper-arm, as can be seen in Fig. 1c, and hence, the y-axis of B_{i_J} $(y_{B_{i_J}})$ is equal to zero. Then, Eq.(3) yield to become:

$$L_1^2 = {x_{B_{i_J}}}^2 + {z_{B_{i_J}}}^2 \tag{4}$$

There are two unknown variables remaining in Eq. (4), $x_{B_{i_J}}$ and $z_{B_{i_J}}$. To determine these variables, another equation was required. Therefore, an equation was developed from the lower-arm's point of view. It was expressed as follow,

$$L_2^2 = \left(x_{C_{i_J}} - x_{B_{i_J}}\right)^2 + \left(y_{C_{i_J}} - y_{B_{i_J}}\right)^2 + \left(z_{C_{i_J}} - z_{B_{i_J}}\right)^2 \tag{5}$$

where $L_2$is the length of lower-arm. By subsitusing $x_{B_{i_J}}$ in Eq.(4) into Eq.(5), then Eq. (5) yield to become,

$$T.{z_{BS_{i_J}}}^2 + V.z_{BS_{i_J}} + W = 0 \tag{6}$$

where,

$$\begin{aligned} T &= 4\,{x_{C_{i_J}}}^2 + 4\,{z_{C_{i_J}}}^2 \\ V &= -4\,z_{C_{i_J}}\left(L_2^2 - {x_{C_{i_J}}}^2 - {y_{C_{i_J}}}^2 - {z_{C_{i_J}}}^2 - L_1^2\right) \\ W &= \left(L_2^2 - {x_{C_{i_J}}}^2 - {y_{C_{i_J}}}^2 - {z_{C_{i_J}}}^2 - L_1^2\right)^2 - 4.{x_{C_{i_J}}}^2.L_1^2 \end{aligned} \tag{7}$$

z_{B_i} in Eq. (6) could be determined using quadratic equation. After z_{B_i} was obtained, then x_{B_i} in Eq.(4) could be determined. In this study, the rotation of actuator was represented by the orientation of upper-arm relative to JCF, which is called upper-arm angle (λ_i). Upper-arm angle is the angle between upper-arm and a vertical line at A_i (λ_i), and it was determined as follow,

$$\lambda_i = \cos^{-1}\left(\frac{z_{B_i}}{L_1}\right) \tag{8}$$

Fig. 2: construction of robot and testing on flat trajectory

3. Implementation and discussion

The mechanical construction of robot, as presented in Fig. 2, used 4 mm thick aluminium plate for the construction of the roof and the base of robot. While for the pillars, 30x30 mm aluminium rods was used for supporting the base and the roof. The upper-arm was actuated by NEMA 23 stepper motor and they were connected using a bracket. The robot has 6 upper-arms, in which, every upper-arm was connected to a lower-arm using a fish-eye bearing. The arms were used for supporting and moving the mobile platform in carrying the load and the end-effector. Initially, when the start button is pushed, then the robot calibrates the position of end-effector to the home position. The home base means that all the upper-arm at the same orientation. In this case, the upper-arm angle (λ) was set at 135°. The calibration process was carried out by rotating the stepper motors 1, 3 and 5 counter-clockwise and stepper motors 2, 4, 6 clockwise.

The rotation of every motor was determined using the developed algorithm based on the expected position and orientation of the end-effector. Therefore, the implementability of the proposed method was tested using Matlab. Matlab was used to develop a simulation program based on the derived equation. In this study, the physical of 6 dof parallel robot was also constructed. The motion of the end-effector was determined using the proposed algorithm. Two experimental tests were performed to check the applicability of the algorithm and the accuracy of the robot.

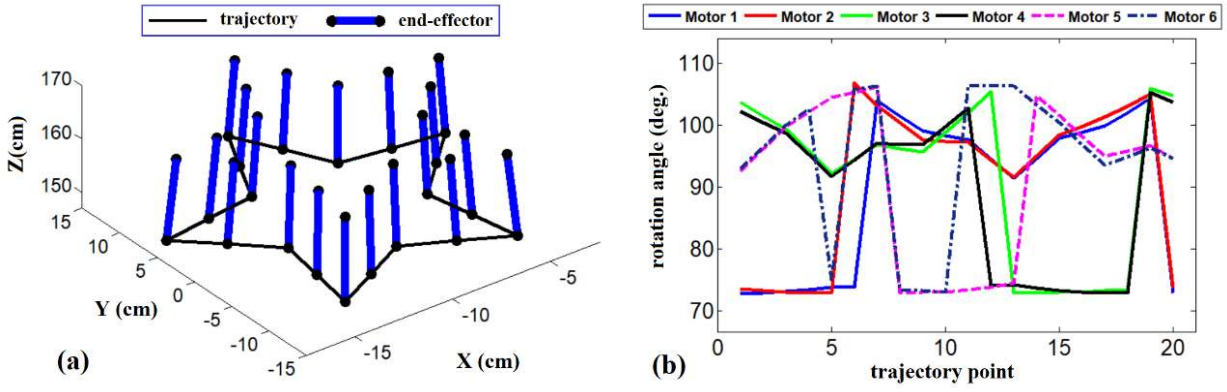

Fig. 3: algorithm implementation test, a) end-effector orientation and position on the designed trajectory, b) rotation angle of every motor

3.1. Calculating the rotation of motor

In this study, the movement of the end effector was actuated using 6 stepper motors. The rotation angle of the motor, which is required to move the end-effector for obtaining the expected position, was calculated using the developed simulation program. To check the applicability of the proposed method, an implementation test was performed. In this test, the end-effector was set to follow a star shape trajectory as shown in Fig. 3a. The blue line with black dots at the end, as presented in Fig. 3a, represented the orientation and position of the end-effector during following the trajectory. There are 20 points in the designed trajectory that were tested. In following the trajectory, all the motors continuously rotated to achieve the expected position and orientation of the end-effector. The rotation angle of every motor was presented in Fig. 3b. From this figure can be concluded that the rotation of motors was very fluctuate due to the posture of end-effector as shown in Fig. 3a.

Verification to ensure the accuracy of the propose algorithm was performed using Solidworks Motion Simulation. Solidworks Motion Simulation are graphical simulations of motion for assembly models. Using this software, the components of robot can be moved to the expected position, and then the position and orientation of the robot can be checked and measured. In this study, the coordinate of point B, which is the joint between upper-arm and lower arm, was checked and compared with those obtained using simulation program. The designed trajectory as shown in Fig. 3a was used for model verification. The results

demonstrated that the data calculated using the proposed algorithm and those measured using Solidworks were exactly similar. The deviations were zero or can be considered as zero. This result could be obtained because this method is analytical, in which the calculation provides exact result. One of the main advantages of analytical based method compared to approximation methods, such as numerical method, is accuracy.

3.2. Verifying the accuracy of robot

The accuracy of physical robot in performing the task was tested for two cases. The tests were aimed to check the ability of the end-effector to reach the designed trajectory based on the designed appointed points. For this purpose, a pen was attached on the end effector and a scale paper was put on the flat floor in the working space as shown in Fig. 2**.** In this test, the robot was programmed to follow two designed trajectories. The trajectory that was obtained by the physical manipulator was then measured and the results were compared with the designed trajectory, as shown in Fig. 4(a) and Fig. 4(b). From these figures can be seen that the deviations were relatively small. The deviation was calculated using a statistical method known as the mean squared error (MSE), and the total error for both tests was 1.71%. Physical checking to the robot was performed, and it was concluded that the deviation was occurred due to the imperfection on the construction of robot, especially on the joint between the upper-arm and lower-arm.

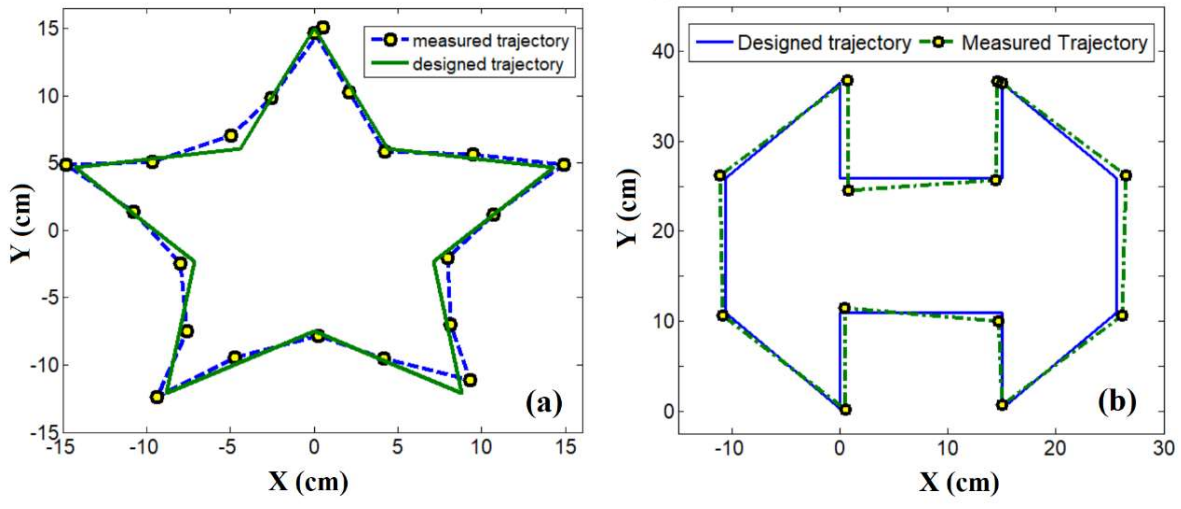

Fig. 4 Experiment test of physical robot on flat surface

In previous study [25], the AIKS method was compared with a Jacobian based method in terms of computational time. The result demonstrated that the computational time of analytical based method was shorter than Jacobian based method. Hence, it can be taken into conclusion that the proposed method is not only accurate, but also computationally cheaper.

4. Conclusion

This paper has presented the development of analytical method in calculating invers kinematics of parallel robot. The method of analytical invers kinematics simulation (AIKS) was successful extended so that it could be used for 6 dof parallel robot. Several tests on the implementability of the proposed algorithm, as well as the physical manipulator were performed. Based on the tests result, several conclusions can be taken.

a. The implementation test on the analytical method to calculate the rotation degree was performed, the result showed that the algorithm was applicable to calculate the rotation angle of complex trajectory.
b. The implementation and accuracy of the physical robot was also tested. The motion of robot was programmed using the proposed algorithm. The robot was tested to follow three different trajectories and the result demonstrated that the robot could follow the trajectories well. The verification tests showed that the deviations of the physical robot were relatively small.

Flexible Automation and Intelligent Manufacturing

Confirmation of Attendance at FAIM 2019

Delegate:

Name : Hendriko Hendriko
Article : Developement of invers kinematics method for 6-dof parallel robot using analytical approach

To whom it may concern

On behalf of the FAIM 2019 (Flexible Automation and Intelligent Manufacturing) Conference we are pleased to confirm that the above delegate attended our recent and presented their work at our International Conference.

The work has been peer reviewed by a team of academics and will be forwarded to Procedia Manufacturing for online publication.

The conference this year was hosted by the University of Limerick from June 24th to June 27th 2019.

We thank all our delegates for attending and making FAIM2019 an enjoyable and rewarding experience for all.

Further information on the conference, conference schedule etc. is available from www.faimconference.com

Best regards

Dr. Alan Ryan

Chair FAIM2019 Organising Committee
